1	REMARKS
2	
3	The specification has a minor addition at page 5, of form and not of substance, and is
4	therefore <u>not</u> new matter.
5	The claims are now found on a separate sheet.
. 6	As to the rejection of Cheiky in view of Scher, the Examiner is in error, because the Cheiky
, 7	patent shows a layer only in one side of the anode material. Layer 16 is an oil, an easily removeable,
8	nonpermanent film. It is inappropriate to equate a polymer which is a permanent layer for an oil
9	film, especially when they are used for two different purposes. Nothing in either reference teaches
10	hermitically sealing the sodium within the tape and such could never transpire in an oil layer.
11	The addition of Watanabe doesn't solve the problem, as the product of applicant is not
12	intended to be roll wound, but rather fed through continuously. There is a difference between class
13	1 conductor and a class 2 conductor. Applicant is class 1. f
14	If there are any issues unseen by counsel, the Examiner is urged to contact him in
15	California at 916-485-5000.
16	
17	
18	Respectfully submitted,
19
